

There are holes in my plant's leaves, what do I do?

My plant looks like it's dying, what do I do?

Plant problems happen for many reasons! Let's figure out what to do...

**Step 1: Do you know what is causing the problem?**

Not really, but what should I spray on it?

Yes!

**Whoa!** Spraying chemicals might cause more harm. First, find out what the problem is.

**Step 2: Okay! Next, are you sure you need to take action?**

You mean, I could just let it be?

Yes! My plants are getting destroyed!

It depends! Do you need more information about the problem?

Have you tried non-chemical methods first?

No, what are those?

Yes. What else can I do?

We can help! Submit your garden question or photo using the QR code or go to this link:

**Step 3: Chemicals *might* be an option, but they are the last resort! Use them wisely and sparingly.**

**Always follow all the instructions on the pesticide label.**
