

There are holes in my plant's leaves, what do I do?

My plant looks like it's dying, what do I do?

Plant problems happen for many reasons! Let's figure out what to do...

Step 1: Do you know what is causing the problem?

Not really, but what should I spray on it?

Whoa! Spraying chemicals might cause more harm. First, find out what the problem is.

We can help! Submit your garden question or photo using the QR code or go to this link:

go.wisc.edu/PlantQ

Yes!

Step 2: Okay! Next, are you sure you need to take action?

You mean, I could just let it be?

It depends! Do you need more information about the problem?

No, what are those?

Yes! My plants are getting destroyed!

Have you tried non-chemical methods first?

Yes. What else can I do?

Step 3: Chemicals *might* be an option, but they are the last resort! Use them wisely and sparingly.

Always follow all the instructions on the pesticide label.
